## What is AquaPing?

AquaPing, is a project developed to solve the absences of apps that care about the future of our main living resource WATER. This app let the people around the world join scientist and qualified personnel to contribute with the actual problematic of water contamination. Now a days, water pollution and the lack of databases and resources has increased exponentially, because most of us don't know where the water sources are located or which are the principal pollutants and where they are coming from.

The principal objectives of most governments around the world are Health and Care of their people, so we decided support NASA by developing this mobile app to focus in water resources and which ones are purified and which ones are infected with several different infections or diseases.

## Our Project

First we log into NASA SPACE APPS we read various challenges, but this one caught our attention at first glance because it is a world class issue and we need to attend it and solve it immediately because our children depends on us and we can't just ignore it and let them down until there's no more usable water.

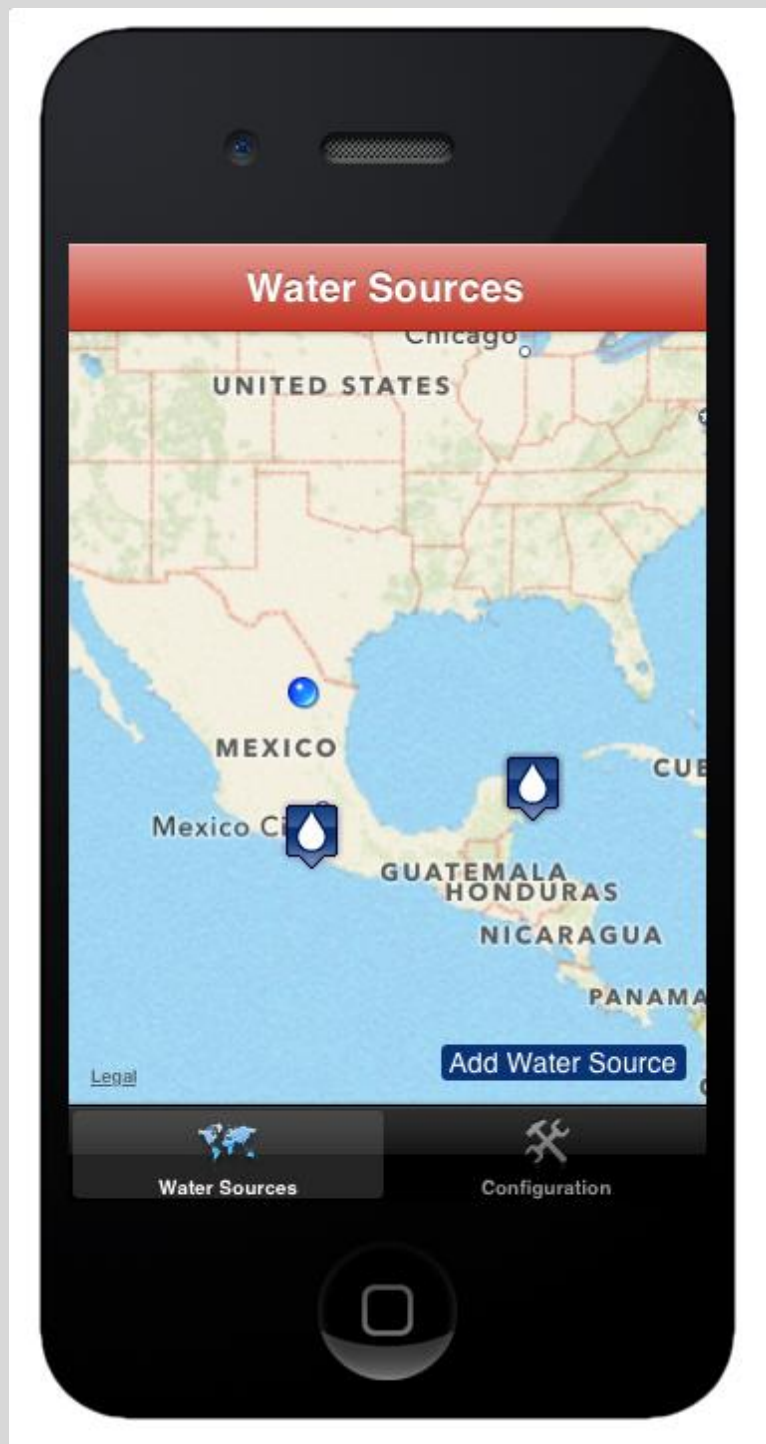

By this project succeeding we will be able to locate most water bodies in our planet and after this, governments and non-profit organizations will look over the affected water bodies and will clean them and get them back to its natural state, another positive thing about this project is that it will also teach us to keep garbage and pollutants in their respected places and companies will have to follow the proper guidelines and regulations.

# AquaPing

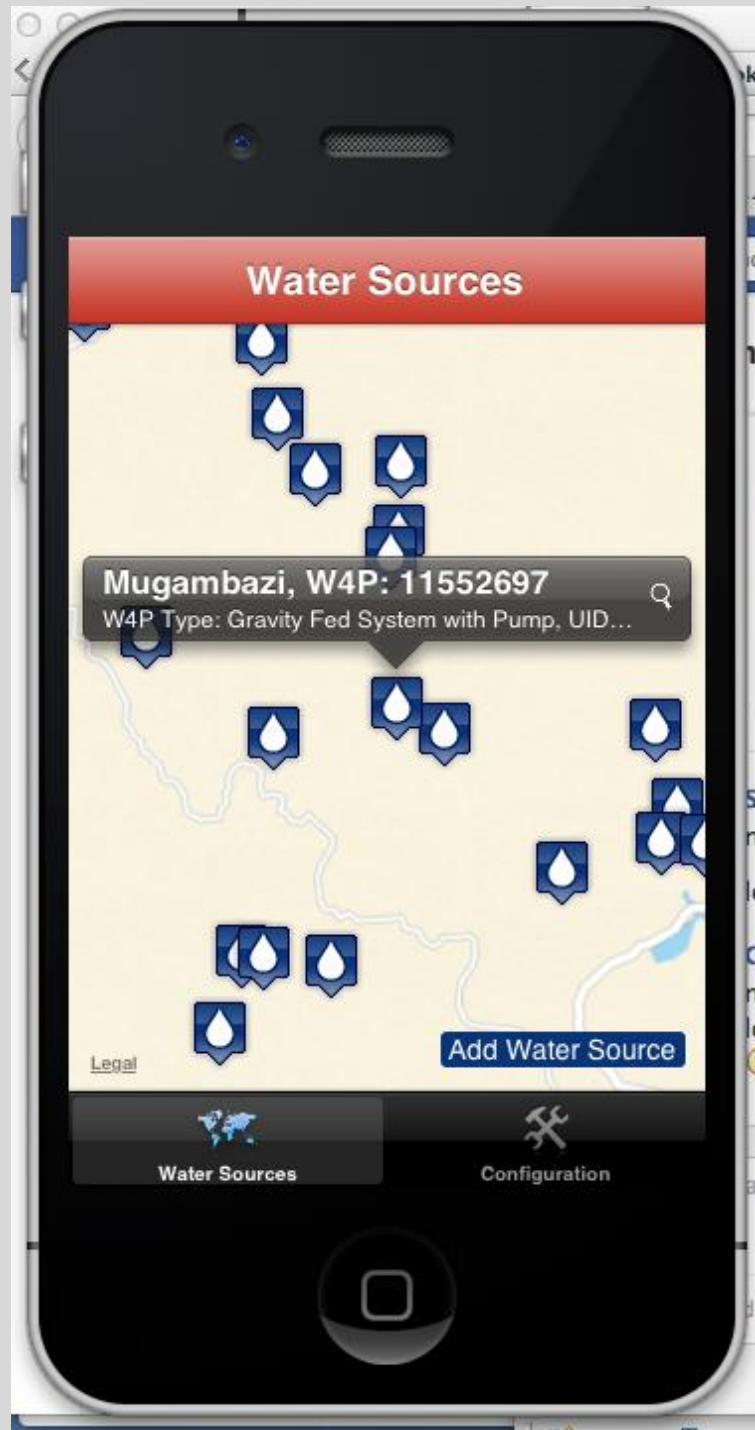

## Conclusion

In brief, with this app people will be able to report affected and unidentified water body, after this institutions will take necessary actions to restore and give the proper maintenance to our most important resource named water.
